Primary II is a next generation variety with excellent overall turf quality. It is highly rated for drought stress, salt tolerance and heat tolerance, making Primary II a great option for areas where there is not much water or have saline irrigation water. One of the most efficient ways to improve the health of the turfgrass in salinity stress situations is to select and use salt tolerant cultivars like Primary II.

It is quick to establish and has excellent divot recovery for a dense and durable turf. Primary II produces an elegant and uniform turf with superior color, durability and fine-leaved texture. Primary II is an excellent choice for warm season overseeding of dormant Bermuda on golf courses, home lawns, and commercial properties.

## Benefits

- Top 3 overall Turf Quality, LPI Group 2
- Top 10 Drought Stress Trial
- Top 10 Establishment
- Salt Tolerance 
- Divot Recovery
- Gray leaf spot resistance 

## Seeding Rates

Permanent Turf:	7-8 lbs/1,000 square feet
Overseeding:	3-4 lbs/1,000 square feet
Overseeding Warm Season Turf:	10-20 lbs/1,000 square feet
