

BIG SKY

FORAGE TALL FESCUE

Big Sky is a next generation 0% endophyte forage tall fescue combining semi-soft leaves with high dry matter yield. Big Sky is a true dual purpose forage tall fescue meant for usage in both grazing and haying environments. Big Sky is a later maturing variety than Fawn and has improved disease resistance reducing necessary fungicide applications.

APPLICATIONS

- Excellent as primary component of a grazing mix
- Excellent as primary component for pasture
- Excellent for hay production either as pure tall fescue or in mixtures with legumes

MANAGEMENT

- Planting Rate: 20 - 25 pounds per acre
- Planting Depth: 1/4 - 1/2 inch
- For optimum quality and yield, harvest at early boot stage

FEATURES

- Soft leaved
- Excellent disease resistance
- Endophyte free
- Improved quality

BENEFITS

- Increased uptake by livestock
- Improved persistence and longevity
- Improved animal performance

PERFORMANCE DATA

Variety	10/12/22
Triumphant	0.41
BigSky	0.38
Fawn	0.36
KY31	0.30
Hyperbola	0.30
Greendale	0.28
Kiowa	0.27
5% LSD	0.11

Dry Matter Yield: Tons/Acre

New York Forage Legume and Grass Variety Yield Trials, Perennial Cool Season Grass Trials Sown on May 26, 2022.
