

FORAGESTAR

MEDIUM-MATURITY ORCHARDGRASS

Foragestar is a medium-maturity orchardgrass selected for seedling vigor, forage production, and rapid regrowth. Foragestar has a robust disease package, including tolerance from endophytic choke. Foragestar provides consistent performance across diverse environments. Proven in rigorous trials, Foragestar delivered above-average yields in Kentucky across four cuttings and achieved the highest yield in New York trials. Its drought and disease resilience make Foragestar a reliable, high-yielding variety for any forage operation.

APPLICATIONS

- Excellent as a grass component in alfalfa/grass mixtures
- Ideal for grazing, either as a pure stand or in a grazing mixture
- Excellent for hay production as a pure stand or in mixtures

MANAGEMENT

- Planting Rate (pure stand): 10 - 15 pounds per acre
- Planting Rate (OG/AL mixture): 5 - 8 pounds per acre
- Planting Depth: 1/4 - 1/2 inch
- Cutting Height: Ideal cutting height to promote persistence is 3"

FEATURES & BENEFITS

- Robust disease package
- Excellent establishment
- Improved persistence and quality
- High forage yields
- Good drought tolerance

PERFORMANCE DATA

Variety	Total
Foragestar -----	5.35
Saletopper -----	5.15
Potomac -----	4.99
Persist II -----	4.81
Capture -----	4.53
Drover -----	3.91
