Euromic is a fine-leaved micro clover ideal for low-maintenance lawns. Euromic grows low to the ground, with slow regrowth of small leaves, minimal flowering, and efficiently closes existing gaps. Unlike most clovers, Euromic endures frequent mowing and moderate wear.

As a nitrogen-fixing plant, Euromic significantly reduces the need for fertilizer, making it the ultimate option for grass blends or natural lawns. Euromic is winter hardy and will provide green color year-round.

Benefits

- No need for additional N fertilizer
- Less water requirements
- Low maintenance
- Green color year around
- Tolerates mowing and wear

Seeding Rates

Pure Stand Seeding Rate:	1-2 lbs./1,000 square feet
Mixture Seed Rate:	0.5-1 lb./1,000 square feet
